The cost of heating a home will vary based on several factors, including the size of the home, heating fuel type, heating system efficiency, insulation of the home and even how the home is used. The chart above compares various heating system efficiencies and fuel types to Stearns Electric's rates. As an example, if you have an 80% efficient propane boiler, you would need to purchase propane for less than \$1.22 to beat the EnergyWise rate for electric heating.

AIR SOURCE HEAT PUMP SAVINGS

The chart to the right shows the benefit of cooling and heating a 2,000 square foot home with an air source heat pump rated at 250% efficient and operating on a Stearns Electric EnergyWise rate.

Cooling Mode	EnergyWise Summer Rate 7.7¢ per kWh	Regular Summer Rate 12.5¢ per kWh	Savings in Cooling Mode		
Annual Usage 1000 kWh	1000 x \$.077 = \$77.00	1000 x \$.125 = \$125.00	\$48		
Heating Mode	2,000 square foot home with a five year average HDD of 8,200 per year.			Savings	
Electric Heat 100% Efficient	5.7¢ per kWh x annual kWh of 25,628 = \$1,461			1st Year	5 Years
L.P. Gas 95% Efficient	\$1.66 gal x annual gal 1006 = \$1,670			\$418	\$2,090
L.P. Gas 80% Efficient	\$1.66 gal x annual gal 1,195 = \$1,984			\$543	\$2,715
Fuel Oil 85% Efficient	\$2.53 gal x annual gal 742 = \$1877			\$857	\$4,285
				\$750	\$3,750
